Professional Summary

Staff-level backend engineer with 9.5 years of experience designing and delivering distributed systems, fintech platforms, and AI-powered products. Deep expertise in Golang, cloud-native architecture, microservices, and agentic AI workflows. Proven ability to lead technical strategy, drive system-wide performance improvements, and scale engineering teams. Experienced in building high-throughput, low-latency systems on Kubernetes, Kafka, and Google Cloud infrastructure.

Technical Skills

- **Languages:** Golang, PHP, Node.js, Bash/Shell
- **Distributed Systems:** Microservices, Event-Driven Architecture, Kafka, Google Pub/Sub, gRPC, REST APIs
- **AI and Agentic Systems:** Agentic Workflows, CopilotKit, AG-UI (a2ui), MCP (Model Context Protocol), CubeJS, GitHub Copilot CLI, LLM Integration
- **Cloud and Infrastructure:** Google Cloud Platform (GCP), Docker, Kubernetes, CI/CD, GitHub Actions
- **Databases:** MySQL, Google Cloud Spanner, MongoDB, Redis
- **Observability:** ELK Stack, Distributed Tracing, Correlation ID Frameworks, Alerting Systems

Professional Experience

Lead Engineer II

Noida, India

Brevo (formerly Sendinblue)

Jan 2024 – Present

- Architected and delivered **Brevo Data Layer**, an agentic analytics platform on CubeJS enabling natural language querying of business data; integrated AG-UI, MCP, and CopilotKit for streaming responses with built-in query validation and dynamic visualizations (line, bar, pie, donut, tabular).
- Embedded GitHub Copilot CLI into the engineering workflow, reducing vulnerability fix cycles from 2 hours to 15 minutes, cutting test generation time by 75%, and automating release and rollback PR creation.
- Designed and implemented a distributed infrastructure overhaul that improved **system throughput by 30% and reduced cloud operational costs** across production services.
- Developed a company-wide unified observability system incorporating correlation ID propagation, structured logging, and alerting thresholds, **reducing mean time to resolution (MTTR) by 40%**.
- Defined and enforced platform-wide API security standards including signed URL implementation for time-limited, secure resource access.
- Led technical design reviews and architecture decisions across multiple backend services; provided engineering mentorship to a team of 8 engineers, reducing onboarding time by 25%.
- Collaborated with product and business stakeholders on R&D initiatives, contributing to a 15% improvement in market competitiveness through new product capabilities.

Lead Engineer

Noida, India

Brevo (formerly Sendinblue)

Jan 2022 – Dec 2023

- Led end-to-end technical design and delivery of fintech platform features, owning architecture from requirements through production.

- Architected and published a reusable Golang validation library adopted across multiple internal services, reducing duplicated logic and maintenance overhead.
- Established automated testing frameworks and code quality gates, significantly improving release confidence and reducing production defect rates.
- Partnered with cross-functional stakeholders to align backend architecture with product strategy and compliance requirements.

Senior Software Engineer

Noida, India

Brevo (formerly Sendinblue)

Apr 2020 – Dec 2021

- Led migration of legacy PHP monolith components to Golang microservices, reducing technical debt and service coupling.
- Optimized critical API paths, achieving p95 latency under 3 seconds on high-traffic fintech endpoints.
- Designed and implemented CI/CD pipelines using GitHub Actions, improving deployment frequency and system stability.

Lead PHP Developer

Bangalore, India

ESEC Forte Technologies Pvt Ltd

Jul 2019 – Apr 2020

- Developed and optimized content management features using Angular 8 and CodeIgniter; managed delivery milestones from design to release.

Software Engineer

New Delhi, India

E-Square Alliance Pvt Ltd

Nov 2018 – Jun 2019

- Designed database schemas and REST API contracts for enterprise applications; built a role-based CMS using Angular and Laravel.

Software Engineer

Pune, India

Tech Mahindra

Aug 2016 – Oct 2018

- Built and maintained microservices for internal enterprise portals; integrated CyberArk PAM with applications via AutoIT scripting; refactored legacy code to improve maintainability and performance.

Personal Projects

Lyra – Type-Safe DAG Task Orchestration Library (Go)

github.com/sourabh-kumar2/lyra

- Designed and published an open-source Go library for orchestrating dependent tasks as a Directed Acyclic Graph (DAG) with automatic concurrency, type-safe result passing, and built-in cycle detection.

DNS-Discovery Tool (Go)

github.com/sourabh-kumar2/lyra

- Built a high-performance in-memory DNS server in Go supporting dynamic service discovery with A, AAAA, and TXT record resolution, eliminating hardcoded service configurations.

Education

B.Tech, Electronics and Communication Engineering

Jul 2012 – Jun 2016

B.M.I.E.T, Sonapat, Haryana

Awards

- Brevo Iron Pillar Award (2024)
- Brevo Spotlight Award (2023)
- Tech Mahindra Pat On The Back Award (May 2018)
- Tech Mahindra Excellence Certificate (Sept 2017)
